MASTER INDEX

A journal devoted to the physics and chemistry of interfaces

Editor:
Harry C. Gatos, Cambridge, MA

Regional Editors:
George Comsa, FRG; Shinji Kawaji, Japan; Richard M. Lambert, UK

Master Index to Volumes 241–250

SUSCA MI 241–250, 1–122 (1991)

North-Holland

EDITORIAL ADDRESSES:

Editor:
Professor Harry C. Gatos, Bldg. 13, Massachusetts Institute of Technology, Cambridge, MA 02139, USA
Telefax: +1-617-258 7349

Regional Editors:
Professor George Comsa, Institut für Grenzflächenforschung und Vakuumphysik der KFA Jülich, Postfach 1913, D-5170 Jülich 1, Fed. Rep. of Germany
Telefax: +49-2461-58627

Professor Shinji Kawaji, Department of Physics, Gakushuin University, 1-5-1 Mejiro, Toshima-Ku, Tokyo 171, Japan

Dr. Richard M. Lambert, Department of Chemistry, University of Cambridge, Lensfield Road, Cambridge CB2 1EP, UK
Telefax: +44-223-336362

All correspondence with the publisher regarding manuscripts accepted for publication should be addressed to:
Surface Science Technical Editors, P.O. Box 103, 1000 AC Amsterdam, The Netherlands
Telephone: +31-20-5862 526; Telefax: +31-20-5862 580.

Please do not use telefax for the transmission of manuscripts.

Detailed information on submission and preparation of manuscripts may be found in the Instructions for Authors on page 3 of the cover.

Surface Science is published in semi-monthly issues. For 1991, 17 volumes have been announced. The subscription price for these volumes is Dfl. 6885.00 (US$ 3624). Postage and handling amount to Dfl. 510.00 (US$ 268). Therefore the total price is Dfl. 7395.00 (US$ 3892). The price for a combined subscription to the 1991 volumes of Surface Science, Applied Surface Science and Surface Science Reports is Dfl. 9555.00 (US$ 5029), including postage and handling. The Dutch guilder prices are definitive; the currency equivalents are for your guidance only.
Subscriptions should be sent to the publisher, Elsevier Science Publishers B.V., Journals Department, P.O. Box 211, 1000 AE Amsterdam, or to any subscription agent or bookseller. Claims for issues not received should be made within three months of publication. If not, they cannot be honoured free of charge.
Books for review should be sent to Professor H.C. Gatos.

No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without the written permission of the publisher, Elsevier Science Publishers B.V., P.O. Box 103, 1000 AC Amsterdam, The Netherlands.
Special regulations for authors – Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.
Submission to this journal of an article entails the author's irrevocable and exclusive authorization of the publisher to collect any sums or considerations for copying or reproduction payable by third parties (as mentioned in article 17 paragraph 2 of the Dutch Copyright Act of 1912 and in the Royal Decree of June 20, 1974 (S. 351) pursuant to article 16b of the Dutch Copyright Act of 1912) and/or to act in or out of Court in connection therewith.
Special regulations for readers in the USA – This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the US Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. All articles published prior to 1981 may be copied for a per-copy fee of US$ 2.25, also payable through the Center. (N.B. For review journals this fee is US$ 0.20 per copy per page.) This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.

No responsibility is assumed by the Publisher for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions or ideas contained in the material herein. Although all advertising material is expected to conform to ethical standards, inclusion in this publication does not constitute a guarantee or endorsement of the quality or value of such product or of the claims made of it by its manufacturer.

This issue is printed on acid-free paper.

MATERIALS SCIENCE & ENGINEERING

A

Structural Materials: Properties, Microstructure and Processing

Editor-in-Chief
H. Herman
Stony Brook, NY, U.S.A.

Aims and Scope

The journal provides an international medium for the publication of theoretical and experimental studies and reviews of the properties and behavior of a wide range of materials, related both to their structure and to their engineering application. The varied topics comprising materials science and engineering are viewed as appropriate for publication: these include, but are not limited to, the properties and structure of crystalline and non-crystalline metals and ceramics, polymers and composite materials.

NEW TITLES IN CONDENSED MATTER PHYSICS

The following titles are volumes in the series Modern Problems in Condensed Matter Sciences. The series editors are V.M. Agranovich and A.A. Maradudin.

Helium Three

W.P. Halperin and
L.P. Pitaevskii *(editors)*

(Volume 26)

1990 xiv + 950 pages
US $271.50/Dfl.475.00
ISBN 0-444-87476-3

One of the most interesting topics in many-body physics today is the study of quantum fluids. This book deals with both theoretical and experimental aspects of superfluid helium three and spin polarized helium three. Relationships between properties of helium three and topics in other fields are established including superconductivity, non-linear dynamics, acoustics, and magnetically polarized quantum systems.

Landau Level Spectroscopy

G. Landwehr and E.I. Rashba
(editors)

(Volume 27, in 2 parts)

1991 cxx + 1406 pages (in 2 parts)
Part I: US $283.75/Dfl.495.00
ISBN 0-444-88535-8
Part II: US $283.75/Dfl.495.00
ISBN 0-444-88873-X
Set: US $511.50/Dfl.895.00
ISBN 0-444-88874-8

This set of books is unique because it covers the most important electronic properties of solids in strong magnetic fields, including inter- and intraband optical spectroscopy and transport phenomena. It focuses on fundamental problems in Landau level spectroscopy, but special attention is paid to the phenomena important for applications in electronics such as spectroscopy of two-dimensional electrons, spin-flip Raman scattering and light emission by hot carriers.

Hopping Transport in Solids

M. Pollak and B. Shklovskii
(editors)

(Volume 28)

1991 xiv + 452 pages
US $200.00/Dfl.350.00
ISBN 0-444-88037-2

The rapid growth of interest in hopping transport has followed in the footsteps of the development of physics of disordered systems during the last three decades. The intense interest in disordered solids can be attributed to the technological potential of the new noncrystalline materials, as well as to new fundamental problems discovered in solid state physics when a crystal is no longer translationally symmetric.

In the last decade hopping systems such as organic polymers, biological materials, many oxide glasses, mesoscopic systems, and the new high-temperature superconducting materials in their normal state have attracted much interest. New phenomena investigated recently include interference and coherent scattering in variable range hopping conduction, mesoscopic effects, relaxation processes and thermo-electric power, and thermal conductivity caused by hopping transport. This volume presents the reader with a thorough overview of these recent developments, written by leading experts in the various fields

Mesoscopic Phenomena in Solids

B.L. Altshuler, P.A. Lee and
R. Webb *(editors)*

(Volume 30)

1991 about 600 pages
US $ 243.00/Dfl. 425.00
ISBN 0-444-88454-8

The physics of disordered systems has enjoyed a resurgence of interest in the last decade. New concepts such as weak localization, interaction effects and Coulomb gap, have been developed for the transport properties of metals and insulators. With the fabrication of smaller and smaller samples and the routine availability of low temperatures, new physics has emerged from the studies of small devices. The new field goes under the name "mesoscopic physics" and has rapidly developed, both experimentally and theoretically. This book is designed to review the current status of the field.

For a complete contents list and/or further information on the Modern Problems in Condensed Matter Sciences series please contact the publisher at the address below.

NORTH-HOLLAND

(Elsevier Science Publishers)
P.O. Box 103
1000 AC Amsterdam,
The Netherlands

In the USA and Canada:
Elsevier Science Publishing Co. Inc.
P.O. Box 882, Madison Square Station
New York, NY 10159, U.S.A.

US $ prices are valid only in the USA and Canada. In all other countries the Dutch Guilder price (Dfl.) is definitive. In New York State applicable sales tax should be added. All prices are subject to change without prior notice. Customers in The Netherlands add 6% BTW

INSTRUCTIONS FOR AUTHORS

Contributions must be written in English. **They should be submitted in triplicate with original drawings of the figures** (no larger than ca. 20 × 30 cm) and an abstract in English. All manuscripts other than Letters, originating in the Federal Republic of Germany, the Democratic Republic of Germany and Austria, should be submitted to the Regional Editor in Germany. All manuscripts, other than Letters, originating in European Countries, other than those mentioned above, as well as those originating in Africa, should be submitted to the Regional Editor in the UK. All manuscripts, other than Letters, originating in Japan, should be submitted to the Regional Editor in Japan. All manuscripts originating in North and South America, in Asia (except Japan), in Australia or New Zealand, should be submitted to the Editor.

All Surface Science Letters regardless of country of origin, should be submitted directly to the Editor.

The authors are encouraged to list the names (and addresses) of three to four individuals who are qualified to serve as referees for their paper. The proposed referees should preferably (but not necessarily) reside in the same country or continent as the editor or regional editor to whom the paper is submitted. The referees selected will not necessarily be from the list suggested by the author. The submission of a paper will be taken to imply that the author has satisfied himself that no copyright will thereby be infringed. Upon acceptance of an article by this journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Rapid publication: To qualify for rapid publication in **Surface Science Letters** manuscripts should not exceed 2000 words in length, excluding the abstract, list of references and a maximum of 5 tables or figures which will be counted as seperate.

Page charge and reprints: There is no page charge. Reprints may be ordered from the publisher. An order form will be sent to contributors together with the proofs. 25 reprints of the article will be supplied free of charge.

Preparation of manuscripts

Manuscripts should be typed throughout with double line spacing and wide margins on numbered pages.

The *title page(s)* should contain, in addition to the article title, author(s)' names and affiliations, the text of related footnotes and the text of the abstract. Indicate which author will act as contact author and provide FAX No., telephone No. and telex No., if available.

Tables should be typed on separate sheets at the end of the manuscript. In addition to its serial number, each table should have a sufficiently detailed heading or caption to explain the data displayed in it.

Figures should be numbered and their captions listed together at the end of the manuscript.

References in the text to other publications should be numbered consecutively within square brackets, for example: "...and attributed to OH recombination [1]." and listed together at the end of the text, for example:

[1] S.-C. Chang and M.J. Weaver, Surf. Sci. 241 (1991) 11.
[2] S.J. Hoekje and G.B. Hoflund, Appl. Surf. Sci. 47 (1991) 43.
[3] F.J. Himpsel, Surf. Sci. Rep. 12 (1990) 1.
[4] A. Roth, Vacuum Technology, 3rd ed. (North-Holland, Amsterdam, 1990).
[5] V. Celli, in: Dynamical Properties of Solids, Vol. 6, Eds. G.K. Horton and A.A. Maradudin (North-Holland, Amsterdam, 1990) p. 337.

References to unpublished or not readily accessible reports should be avoided. In the case of multiple authorship all authors should be listed in the references provided they number less than ten. Only in the case of more than ten authors is the first author et al. acceptable.

Formulae in the manuscript should be typed with particular consideration given to characters that may be misinterpreted, e.g.

I (cap.), l (el), 1 (one), ′ (prime)	c, C; k, K, κ (kappa); p, P, ρ (rho)
o (lower case), O (cap.), 0 (zero), ° (deg)	u, v (lower case), ν (nu), V (cap.)
× (times), x (lower case), X (cap.)	Σ (sigma), Σ (sum); Π (pi), Π (product); etc.

If necessary, unusual symbols should be explained in pencil in the margin.

Vectors should be indicated by a wavy underlining, and will be printed in bold-face italics.

Preparation of figures

The publisher requires a set of good quality drawings and photographs to produce the printed line figures and half-tone plates in the journal. Photographic copies ("glossy prints") of drawings are also acceptable for the line figures if they have been sharply focused and evenly exposed. **As a rule, Xerox copies cannot be accepted**. Original drawings and photographs will be returned after publication of the paper.

Line figures: The drawings or glossy prints supplied for the line figures should be 1.5–3 times larger than the printed size of the figures and should contain all the required, carefully applied lettering.

Figures are preferably reduced to a single column width (7.6 cm) unless their complexity, large width-to-height ratio, or need to display special detail makes a larger format necessary (max. printed width ~ 20 cm). Inappropriately sized lettering on a figure may prevent its reduction to the size optimum for its information content. The lettering used on a drawing should be chosen so that after reduction, the height of numbers and (capital) letters falls within the range 1.2–2.4 mm. Care should be exercised in choosing the pen width of machine-plotted graphs. Frequently lines in these figures are too fine compared to the area of the figure.

Shaded areas in line figures should be shown by means of cross-hatching (or a matrix of dots) rather than a continuous grey "wash". Cross-hatching, after reduction, of density less than ~ 25 lines/cm is satisfactory.

Half-tone plates: The photographs supplied for reproduction should be unmounted unless they form part of a composite figure and they should have a somewhat greater contrast than is desired in the printed figure. It is important that the photographs supplied are not already screened (overprinted with the point-matrix used by printers) or moiré patterns will form when they are screened for a second time. When necessary, the top side of a photograph should be marked on the back. A reduction factor should be recommended for a photo when it is not obvious what detail in the photo is of interest.

Colour plates: Illustrations can be printed in colour when they are judged by the Editor to be essential to the presentation. The Publisher and the Author will each bear part of the extra costs involved. Further information concerning colour illustrations and the costs to the author can be obtained from the Publisher.
